

Speeding next generation communications technology to market

If you are building products and enhanced services for the next generation wireline and wireless communications networks, Nuntius Systems can help bring your products to market more rapidly and more efficiently.

Nuntius is a proven technology partner for communications industry leaders and innovative startups alike and our expertise is recognized in real-time IP communications software development. We are now developing a complete set of firmware and middleware software technology that combines with our networking systems expertise to enable DSP and RISC processor companies, along with the evolving Adaptive Computing Fabric platform companies to deliver outstanding products and services in the converging digital network.

Nuntius developed processor-based, communications software modules fit between the H.323 protocol stack and telephony. Our focus is on developing highly optimized codecs, voice activity detection, packetization, echo cancellation, tone detection/generation and several application-layer components that OEM's need to move a voice switch. Our capabilities also provide Digital Signal Processor, Network Processors and RISC processor companies with the real-time intensive embedded telephony packet software and data relay software, which service providers need to be successful over CO or CPE equipment.

Nuntius' expertise and family of communication library software are the foundation for the growth in the latest IP-communications surge. With industry standard building blocks for the transport of real-time audio and video over IP/MPLS/ATM backbone networks you can rely on Nuntius to implement the latest technologies.

Partner with Nuntius on your toughest projects

Nuntius networking software is embedded in terminals, gateways, conferencing bridges and gatekeepers, enabling packet-based networks for basic IP telephony and next generation enhanced IP services. Multifunctional software modules provide cost-effective solutions for the IP communication requirements of service providers and large enterprises.

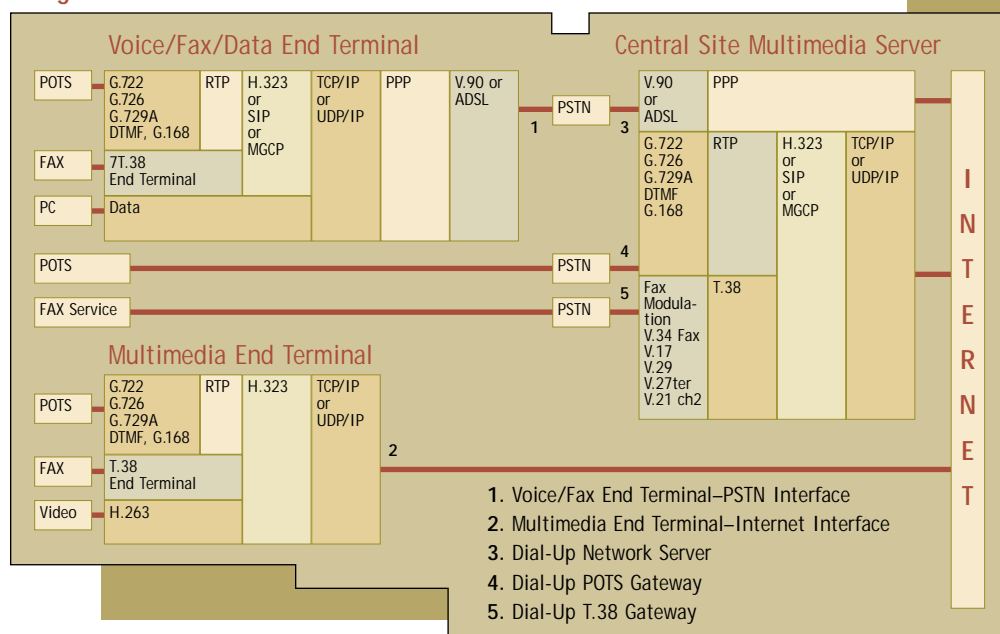

- ▶ Signaling Technologies include Multi-protocol suite of IP communications protocols (SIP, H.323, MGCP/MEGACO) for developing products and services for next generation converged networks.
- ▶ OEM Solutions include optimized versions of VoIP and VoATM communications libraries, customized to meet specific needs of our partners. Included are ITU standards for speech (G.711 PCM, G.722, G.726, G.728, G.729A/B, G.168) coding and video (H.222, H.261, H.263) coding and data protocol for multimedia conferencing (T.120).
- ▶ H.323 Protocol Stack IP Solution includes audio and video codecs, RAS H.225.0, Control H.245, Call Signaling Q.931/H.225, RTP/RTCP, UDP/TCP over the IP layer. The Systems Control User Interface required for implementing an H.323 Multimedia terminal includes: H.245 System Control, H.225.0 Call Control and RAS Control.

Our portable software uses globally accepted architectural and coding standards to ensure the software is independent of the compiler, processor, operating system and architecture of the target system. With extensive expertise in worldwide communications protocol standards Nuntius is focused on implementation and integration of communications firmware and software standards for high performance DSP, RISC and evolving Adaptive Computing Fabric platforms. Core skills include developing complex high performance processor intensive data and speech compression/decompression, modulation/demodulation, forward error correction codes and telephony algorithms. Skills also include related protocol stack software from the physical layer through the transport layer. Our experience slices across the evolving digital voice, data and streaming multimedia segments of the wireless and wired communication markets.

Nuntius provides source code solutions and integration services for platform specific optimization and implementation. Our solutions are used by industry leading suppliers of wireless, Internet, broadband and telephony products. With our growing team of highly experienced communications software professionals, you can count on high-performance software and services to significantly reduce time, risk and cost of implementing standards-based communications protocols.
